| Emission         | Stage II                   |

The **SUN2105E2.MTP** is a 4-stroke, naturally aspirated diesel engine with direct injection and mechanical pump.

This air-cooled engine is suitable for use in the most difficult climatic conditions thanks to its **reliability, simplicity of use and ease of maintenance. The reduced fuel consumption and noise levels** which characterize this engine are appreciated by end-users, as are its **compact dimensions** and absence of a water-cooled cooling circuit which make the engine **easy to install**.

The MTP version includes the starter motor, battery charger alternator, filters and oil sensor. It is Stage II emissions compliant.

A wide range of optional accessories, including a manual starter kit, makes it possible to personalize the product to meet the end-user's requirements.
