

SUN3105TE2.GEN

Engine	SUN3105TE2.GEN
Displacement (l)	3.0
Cylinders	3 l
Injection	Mech.
Max Power (1500rpm)	37 kW
Max Power (1800rpm)	42 kW
Weight	245 Kg
Emission	Stage II

The SUN3105TE2.GEN is a 4-stroke diesel engine with direct injection, mechanical pump and turbocharger.

This air-cooled engine is suitable for use in the most difficult climatic conditions thanks to its reliability, simplicity of use and ease of maintenance. The reduced fuel consumption and noise levels which characterize this engine are appreciated by end-users, as are its compact dimensions and absence of a water-cooled cooling circuit which make the engine easy to install.

The GEN version includes the starter motor, battery charger alternator, filters and oil sensor and can be coupled with any alternator. It is Stage II emissions compliant. A wide range of optional accessories, including a manual starter kit, makes it possible to personalize the product to meet the end-user's requirements.
